ITEM

- 18a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method
(2) the details of subsequent stages of selection and multiplication;
(3) evidence of uniformity and stability; and
(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 18b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
- (1) Identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.
21. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

Origin and Breeding History of the Variety

Summer 1999	Original cross made at Scott, MS between HY574 and DPX 5718 RR
Winter 1999-2000	F1 advanced to F2 under lights in Costa Rica
Summer -Fall 2000	F2 advanced to F4 by the bulk pod method in Costa Rica
Winter 2000-2001	F4 seed planted and about 200 single plants were harvested
Summer 2001	About 200 F5 rows were planted at Scott, MS and row J01-8438 was found to be uniform for the characteristics listed in Exhibit C of this application. Row J01-8438 was selected for apparent yield and general adaptation, based on visual assessment for these traits: absence of plant lodging, medium to tall plant height, and absence of Frog Eye leafspot. The plants in row J01-8438 were harvested in bulk.
Summer 2002	J01-8438 was yield tested at Scott, MS and was advanced based on measured seed yield.
Summer 2003	J01-8438 was yield tested at 8 locations in southern US. Individual plants were harvested out of the border rows to begin the purification process. Purity rows were grown at a winter nursery.
Summer 2004	J01-8438 was yield tested at 13 locations in southern US. Purity plots were harvested providing 200 pounds of seed. 25 pounds of seed was sent to winter nursery in Argentina for increase.
Summer 2005	J01-8438 was yield tested at 13 locations in southern US. Two acres were planted for increase. Approximately 80 units (50 pound) were produced. After four years of testing J01-8438 has been observed to be uniform and genetically stable over generations for characteristics listed in Exhibit C of this application. Variety name 2387029 was assigned. No variants were observed.
